

Amendments to the Specification

Please replace the paragraph at page 44, lines 1-9 with the following replacement paragraph:

cassette described above, the sequences of recombination site 2 and recombination site 1 differ from each other, and are recognized by different recombinases. Suitable hybrid promoters include PGK-EM7, for example, as included in PL451 (ATCC Deposit No. PTA-4996, deposited with the ATCC in accordance with the Budapest Treaty on February [[5]] 6, 2003), PL450, PL452 (ATCC Deposit No. PTA-4997, deposited with the ATCC in accordance with the Budapest Treaty on February [[5]] 6, 2003), and PL459. Suitable selection markers include neomycin resistance, ampicillin resistance, kanamycin resistance, or any sequence that produces sensitivity or resistance to an antibiotic when introduced into a cell. Selection markers further include any polypeptide sequence for which a selection system is available (e.g. beta-galactosidase).
